

**iMail Cloud Mail EWS and  
Zimbra  
Connector Limitations – ver 1.1**

## iMail Cloud Mail EWS and Zimbra Connector Limitations

### 1. Purpose

The purpose of this document is to detail the known limitations with EWS and the Zimbra Connector for the iMail Cloud Mail service.

### 2. EWS

Please take note of the following limitations when configuring an account using EWS:

- You can only configure Apple devices to use EWS. Windows machines need to use the Zimbra Connector with a MAPI connection.
- Only one device can be configured to access a single mailbox using EWS. If multiple devices are configured this causes mail synchronisation issues. It is recommended that if there are multiple devices that are required to access a mail that the PC is configured with EWS and phones and tablets to be configured using ActiveSync.

### 3. Zimbra Connector

Please take note of the following limitations when configuring an account using the Zimbra Connector:

- ZCO is supported on the following Microsoft Operating Systems:
  - Windows 10
  - Windows 8.1
- ZCO is supported on the following versions of Microsoft Outlook:
  - Outlook 2019: 32-bit and 64-bit editions of Microsoft Office, including Click to run
  - Outlook 2016: 32-bit and 64-bit editions of Microsoft Office, including Office365 and Client to run versions
  - Outlook 2016: 32-bit and 64-bit editions of Microsoft Office

- A single mail profile can combine Zimbra, IMAP, Exchange and POP accounts but note that you cannot add more than one Zimbra account to an individual profile. Please also note that you can add multiple Zimbra profiles.
- ZCO synchronizes all your folders including email in your Inbox, email you have filed to other folders, Sent Items, Drafts and Trash. It also synchronizes your Calendar, Contacts, Tasks and Notes folders.
