1. Purpose

The purpose of this document is to detail how to set-up an outbound SMTP connector to Securemail or Branding on G Suite.

2. G Suite outbound mail gateway route

- Sign in to your Google Admin console.
- From the Admin console, go to Apps G Suite, Gmail, Advanced settings.
- Click Hosts.
- Click Add Route.
- Enter a route name for the gateway server in the Name field. (Eg. SYNAQ Securemail or SYNAQ Branding)
- Enter the smtp-securemail.iMail.com in the Enter host name field.
- Select the following options:
 - Require mail to be transmitted over a secure transport (TLS) connection (Recommended)—Encrypt messages between sending mail servers and receiving mail servers with Transport Layer Security (TLS).
 - Require CA signed certificate (Recommended) —the client’s SMTP server must present a certificate signed by a Certificate Authority that is trusted by Google.
 - Validate certificate hostname (Recommended)—Verify the receiving hostname matches the certificate presented by the SMTP server.
- Click Test TLS connection to verify the connection to the receiving mail server.
- Click Save.
